

SRC

Robotic Gripper

Model: GS90

SRC presents its first educational gripper manufactured using 3D printing, developed to complement robotics, automation, and hands-on learning applications, offering an accessible, functional solution focused on technological training.

ESTIMATED PRICE

\$120

**Estimated price subject to change. Shipping not included.*

1 integrated MG90/SG90 micro servo motor.

1 DOF for the gripper.

Made of PETG+ using 3D printing.

TECHNICAL INFORMATION

Total weight: 52g

System dimensions (folded): 15 × 10 × 5 cm

Delivery status: Packaged and ready for shipping.

Compatible with a wide variety of microcontrollers.

Working opening 60 mm

Easy integration into educational and research environments.

Education, automation, programming and control practices, as well as robotic project development.

SRC
Design inspired by robotic configurations used in industry and research.

Committed to technological innovation, we design and develop in Mexico educational, robotic, and automation solutions for education, research, and industry, offering functional, accessible, and high-quality products.
Designed and developed in Mexico by SRC.

We believe in the potential of robotics and automation as drivers of innovation. Therefore, we develop solutions that combine design, functionality, and technology to contribute to learning, research, and the evolution of industry.

PROJECT DEVELOPMENT

Project planning.

Project development.

Production and commercialization.
