

Pneumatic Gripper Model: GSNP

SRC presents its pneumatic gripper, designed for robotics, automation, and technical training applications. It offers a functional, durable, and accessible solution for gripping processes, integrating efficiently into academic and industrial projects.

ESTIMATED PRICE

\$550

*Estimated price subject to change. Shipping not included.

Working pressure
from 0.1 to 0.7 MPa.

1 DOF for the
gripper.

Made of Aluminum.

TECHNICAL INFORMATION

Total weight: 118g

System dimensions: 67.4 × 31 × 23.7 mm

Delivery status: Packaged and ready for shipping.

Compatible with a wide variety of
automated systems.

Working opening up to 58 mm

Easy integration into educational and
research environments.

Education, automation, programming and control practices,
as well as robotic project development.

SRC
Design inspired by
robotic configurations
used in industry and
research.

Committed to technological innovation,
we design and develop in Mexico educational,
robotic, and automation solutions for
education, research, and industry,
offering functional, accessible, and
high-quality products.
Designed and developed in Mexico by SRC.

We believe in the potential of robotics and
automation as drivers of innovation.
Therefore, we develop solutions that
combine design, functionality, and technology
to contribute to learning, research,
and the evolution of industry.
