

SRC

Mechanical Transmission Components Kit

Model: SKG100

SRC presents its mechanical transmission components kit, manufactured in PETG using 3D printing, developed to facilitate the design and construction of mechanisms in mechanical and engineering projects, offering a durable, functional, and accessible solution.

ESTIMATED PRICE

\$100

*Estimated price subject to change. Shipping not included.

Compatible with MG996R/SG90 servomotors and DC motor.

Various combinations among these elements.

Made of PETG+ using 3D printing.

TECHNICAL INFORMATION

Total weight: 200g

Package dimensions: 150 × 150 × 30 mm. Includes 100 pcs in the kit.

Delivery status: Packaged and ready for shipping.

Compatible with a wide variety of systems and actuators.

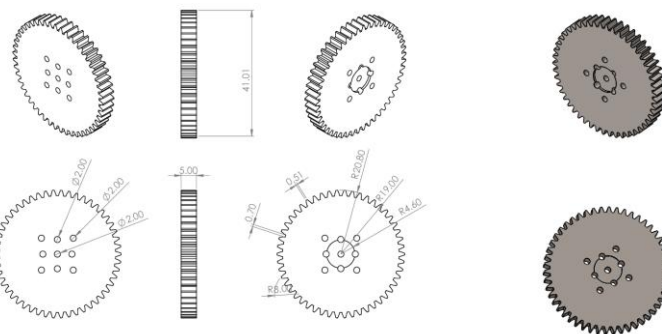

Working diameter up to 65 mm

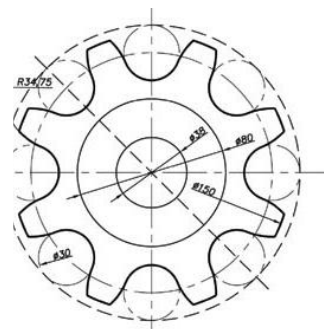

Easy integration into educational and research environments.

Education, automation, programming and control practices, as well as robotic project development.

SRC
Design inspired by mechanical configurations used in industry and research.

Committed to technological innovation, we design and develop in Mexico educational, robotic, and automation solutions for education, research, and industry, offering functional, accessible, and high-quality products. Designed and developed in Mexico by SRC.

We believe in the potential of robotics and automation as drivers of innovation. Therefore, we develop solutions that combine design, functionality, and technology to contribute to learning, research, and the evolution of industry.

PROJECT DEVELOPMENT

Project planning.

Project development.

Production and commercialization.
