

SRC

Servo Motor

Model: S135KC

SRC introduces a servo motor for robotics and automation applications, offering precision in motion control and torque capacity suitable for various mechanisms and technological projects.

ESTIMATED PRICE

\$1250

*Estimated price subject to change. Shipping not included.

Operating voltage
10V to 12.4V.

Torque capacity
135kgcm/13.24 Nm.

Made of ABS plastic,
aluminum block, and
metal gears.

TECHNICAL INFORMATION

Total weight: 168g

System dimensions: 82 × 30.5 × 54.6 mm

Delivery status: Packaged and ready for shipping.

Compatible with a wide variety of
microcontrollers.

Operating range up to 180 Degrees

Easy integration into educational and
research environments.

Education, automation, programming and control practices,
as well as robotic project development.

SAKUTA

135 Kg*cm / 13.24 N*m

SRC
Design inspired by
robotic configurations
used in industry and
research.

Committed to technological innovation,
we design and develop in Mexico educational,
robotic, and automation solutions for
education, research, and industry,
offering functional, accessible, and
high-quality products.
Designed and developed in Mexico by SRC.

We believe in the potential of robotics and
automation as drivers of innovation.
Therefore, we develop solutions that
combine design, functionality, and technology
to contribute to learning, research,
and the evolution of industry.
