

Suction Gripper Model: GSSN6

SRC presents its Suction Gripper, a suction-cup tool made of silicone that also incorporates 3D-printed PETG and prefabricated metal components. Developed for robotics, automation, and engineering projects, it offers a lightweight, durable, functional, and accessible solution used for handling and gripping parts with smooth surfaces.

ESTIMATED PRICE

\$250

**Estimated price subject to change. Shipping not included.*

Compatible with
any vacuum pump.

Various combinations
among these
elements.

Made of silicone,
aluminum, brass,
and PETG+.

TECHNICAL INFORMATION

Total weight: 52g

Package dimensions: 72 × 17 × 17 mm.
Includes 100 pcs in the kit.

Delivery status: Packaged and ready for shipping.

Compatible with a wide variety of
systems and actuators.

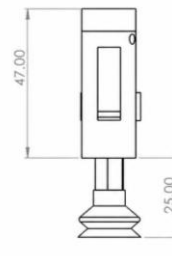

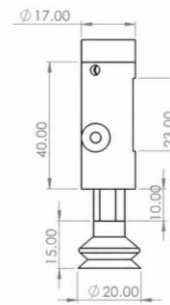

Working diameter up to 20 mm

Easy integration into educational and
research environments.

Education, automation, programming and control practices,
as well as robotic project development.

SRC
Design inspired by
mechanical configurations
used in industry and
research.

Committed to technological innovation,
we design and develop in Mexico educational,
robotic, and automation solutions for
education, research, and industry,
offering functional, accessible, and
high-quality products.
Designed and developed in Mexico by SRC.

We believe in the potential of robotics and
automation as drivers of innovation.
Therefore, we develop solutions that
combine design, functionality, and technology
to contribute to learning, research,
and the evolution of industry.
