

Robotic Gripper Model: GSF996

SRC presents its third gripper manufactured using 3D printing, developed to complement robotics, automation, and hands-on learning applications, offering an accessible, functional solution focused on technological training.

ESTIMATED PRICE

\$200

**Estimated price subject to change. Shipping not included.*

Compatible with 1
MG995R/MG996R/S14KC
servo motor.

1 DOF for the
gripper.

Made of PETG+ using
3D printing.

TECHNICAL INFORMATION

Total weight: 72g

System dimensions (folded): 75 × 158 × 45 mm

Delivery status: Packaged and ready for shipping.

Compatible with a wide variety of
microcontrollers.

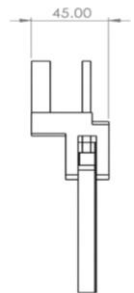

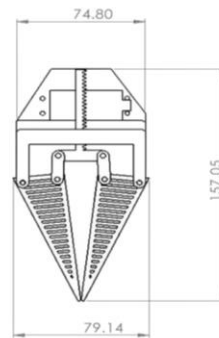

Working opening up to 100 mm

Easy integration into educational and
research environments.

Education, automation, programming and control practices,
as well as robotic project development.

SRC
Design inspired by
robotic configurations
used in industry and
research.

Committed to technological innovation, we design and develop in Mexico educational, robotic, and automation solutions for education, research, and industry, offering functional, accessible, and high-quality products.
Designed and developed in Mexico by SRC.

We believe in the potential of robotics and automation as drivers of innovation. Therefore, we develop solutions that combine design, functionality, and technology to contribute to learning, research, and the evolution of industry.
